

It's Time For A Change!!

A Frequency Change that is!

As you know the shared CTAF 122.975 MHz for OTX1 and 66TE is very congested! We share that frequency with Midway, Eagles Nest, Graham and other airports.

Following several meetings with the Pecan Airport Committee, that included participants from OTX1 and 66TE, we have completed the process to change the CTAF.

Effective Thursday, July 9, 2026 the CTAF for OTX1 and 66TE will change to 123.075 MHz.

The change has been approved by the FCC and both airports will update the Airport Data Information Portal (ADIP) to be effective at the next chart cycle beginning July 9, 2026.

***The light frequencies will also be changing:
Effective Thursday, July 9, 2026 OTX1 will use 123.075 MHz and
66TE will use 122.075 MHz.***

We will be working with our contacts at the FAA to have the charts brought up to date as soon as possible.

If you have any questions please talk to:

Charlie Adams at 817-219-0162 or Mike Robinson at 214-282-9960

Thanks for your attention!
